

Practical No.1

MOHAMMAD QASIM

22-08-2025

Objective:

Write a programme for finding the sum and product of series of numbers

Python Code

```
In [13]: def sumpro(*x):  
          a=0  
          p=1  
          for i in x:  
              a+=i  
              p*=i  
          return a,p  
  
          print("The sum of given series is:",a,"The product of given series is:",p)
```

```
In [12]: sumpro(1,2,3,5)
```

```
Out[12]: (11, 30)
```

Interpretation:

As we can see the sum and product of given series is can be calculated by 'sumpro' function, that is (11,30) respectively.
