

Practical No.2

MOHAMMAD QASIM

22-08-2025

Objective:

Write a programme for finding the number of element in a list or string.

Python Code

```
In [13]: def counting(x):  
         count=0  
         for i in x:  
             count+=1  
         return count
```

```
In [14]: counting([2,3,4,5,6])
```

```
Out[14]: 5
```

```
In [15]: counting("STATISTICS")
```

```
Out[15]: 10
```

Interpretation:

As we can see the no.of element in any list or string is can be counted by 'counting' function, by using this function we count the element of given list [2,3,4,5,6] and string "STATISTICS" as (5,10) element respectively.
